

Job Title: Django Developer

Job Overview

We are looking for a skilled and motivated Django Developer to join our development team. The ideal candidate will be responsible for designing, developing, and maintaining secure and scalable web applications using the Django framework.

Key Responsibilities

- Develop and maintain web applications using Django and Python.
- Design and implement RESTful APIs.
- Integrate front-end elements with server-side logic.
- Work with databases such as PostgreSQL or MySQL.
- Ensure application performance, security, and scalability.
- Debug, test, and optimize applications.
- Collaborate with designers, frontend developers, and project managers.
- Deploy applications and manage servers (Linux environment).

Requirements

- Strong knowledge of Python and Django framework.
- Experience with Django REST Framework.
- Good understanding of databases (PostgreSQL/MySQL).
- Basic knowledge of HTML, CSS, JavaScript.
- Familiarity with Git version control.
- Experience working in Linux environment.
- Understanding of authentication, authorization, and security best practices.

Nice to Have

- Experience with Docker and deployment tools.
- Knowledge of cloud platforms (AWS, DigitalOcean, etc.).
- Basic understanding of frontend frameworks like React or Vue.
- Experience with background tasks (Celery, Redis).

Benefits

- Competitive salary • Opportunity to work on real-world projects • Friendly and growth-focused work environment • Learning and career development support
