Summary

Expert Backend Developer with 7 years of experience specializing in **Python** web frameworks. Master of **Django** and **Django REST Framework**, with deep expertise in database design and API security. Experienced in frontend development using **Angular**, with a solid understanding of component-based architecture adaptable to other frameworks like React.

Technical Stack

Core Languages	Python (Expert) , JavaScript, Shell Scripting
Web Frameworks	Django , Flask, Pyramid, Angular 14+ , RxJS
Databases	PostgreSQL (Advanced tuning), MySQL, Redis
Infrastructure	Linux Administration, Docker, Vagrant, AWS (Basic)
Tools	GitLab CI, PyCharm, JIRA

Professional Experience

- 2018–Present **Lead Python Engineer**, *Logistics Pro*, Chicago, IL
- Designed the core logistics engine using **Python/Django**, handling over 10,000 requests per minute.
 - Developed a monolithic frontend application using **Angular** and TypeScript, creating complex data grids and mapping visualizations.
 - Optimized **PostgreSQL** queries, reducing report generation times from 10 minutes to 30 seconds.
 - Implemented asynchronous task queues using Celery and **Redis** for email notifications and PDF generation.
 - Mentored 3 junior Python developers, conducting code reviews and enforcing PEP-8 standards.
 - Established TDD practices using PyTest, achieving 95% backend code coverage.
- 2015–2018 **Backend Developer**, *SoftSys Inc.*, Chicago, IL
- Maintained and expanded legacy Django 1.8 applications.
 - Built RESTful APIs for mobile application consumption.
 - Collaborated with frontend teams to define JSON contracts.
 - Managed server deployments on DigitalOcean using Bash scripts and Fabric.

Education

2011–2015 **B.E. Computer Science**, *University of Illinois at Chicago*

Relevant Projects

2022 **Inventory Management System**, *Corporate Project*

- Built a robust backend with Django REST Framework.
- Implemented role-based access control (RBAC).
- *Note:* While frontend was Angular, the architectural patterns (Services, Components, State) enable me to pick up React quickly.

■ Certifications

- PCAP – Certified Associate in Python Programming

■ Objective

Seeking a Full Stack role where I can utilize my deep Python/Django expertise while cross-training from Angular to **React.js** to become a versatile React/Python developer.
