

James Smith

Senior Full Stack Developer (Node.js/React)

Summary

Versatile Full Stack Developer with 5+ years of experience in building high-performance web applications. Deeply specialized in the JavaScript ecosystem (**Node.js**, **React**, **Redux**). Although my primary backend experience is in Node.js, I have academic knowledge of **Python** and am actively upskilling in Django to pivot technologies. Strong proficiency in Cloud deployment (AWS) and Agile methodologies.

Skills

Frontend	React.js , Redux, Vue.js, HTML5, CSS3, SCSS, WebSockets
Backend	Node.js , Express.js, NestJS, GraphQL, Python (Basic proficiency)
Database	MongoDB, PostgreSQL, Redis
Cloud/DevOps	AWS (EC2, S3, CloudFront), Docker, CI/CD (CircleCI)
Tools	Git, Jira, Figma, Postman

Experience

- 2019–Present **Senior Javascript Developer**, *Creative Digital Agency*, New York, NY
- Architected the backend for a real-time collaboration tool using **Node.js** and Socket.io.
 - Built a complex Single Page Application (SPA) using **React** and Redux, implementing code-splitting to improve initial load time by 35%.
 - Managed PostgreSQL databases, writing complex queries and stored procedures to handle financial transaction data.
 - Deployed applications to **AWS** using Docker containers and managed load balancing via Nginx.
 - Introduced automated UI testing using Cypress, significantly reducing regression bugs in production.
 - Collaborated with Python developers on microservices integration (consuming Django APIs).
- 2017–2019 **Full Stack Developer**, *FinTech Starter*, Boston, MA
- Developed customer-facing portals using React and Express.js.
 - Integrated third-party banking APIs and ensured PCI-DSS compliance.
 - Utilized **Redis** for caching user sessions and API responses.
 - Set up monitoring and logging dashboards using the ELK Stack (Elasticsearch, Logstash, Kibana).

Education

- 2013–2017 **Bachelor of Science in Information Technology**, *Boston University*, Boston, MA

789 Market Street – New York, NY 10012

1/2

Side Projects

2023 **Python Task Manager**, *Self-Learning*

To broaden my backend skillset, I built a Todo API using **Django REST Framework**.

- Implemented JWT authentication and PostgreSQL integration.
- Documented API endpoints using Swagger/OpenAPI.
- *Goal:* To demonstrate ability to transfer backend concepts from Node to Python.

Certifications

- AWS Certified Cloud Practitioner (2021)
- MongoDB Certified Developer

Why I'm a Fit

While my professional tenure has focused on Node.js, my strong grasp of **React**, **AWS**, and **PostgreSQL** aligns perfectly with your needs. I am looking for an opportunity to transition fully into a Python/Django backend environment, leveraging my strong general software engineering principles.
